

WEB-BASED REPORTING PROJECT

PRD + WEBSITE STRUCTURE DESIGN

Scripture Union (Nigeria) - Eleme Area

Document Type: Product Requirements Document

Version: 1.0

Date: April 2026

Purpose

This document defines the website structure, page design, feature requirements, data model, and phased development plan for a secure internal reporting system that supports structured ministry reports, role-based access, and file attachments.

1. Document Control

<i>Project name</i>	<i>Web-Based Reporting Project</i>
<i>Client / Organization</i>	<i>Scripture Union (Nigeria), Eleme Area</i>
<i>Document purpose</i>	<i>Define the product, website pages, system behaviour, and development phases</i>
<i>Audience</i>	<i>Project sponsor, developer, reviewers, and future maintainers</i>
<i>Scope note</i>	<i>The system is designed as a private internal web application with controlled access</i>

2. Product Overview

The project is a secure web-based reporting platform for Scripture Union Eleme Area. It replaces free-form and document reporting with a structured website experience that guides the Travelling Secretary and other authorized staff through defined report sections, dashboards, attachments, reviews, and approvals.

The design emphasis is not on a plain text document; instead, it presents the reporting process as a website with distinct screens, clear navigation, and role-based actions.

This ensures data integrity, long-term archival, and streamlined analysis of ministry impact across various departments and zones.

3. Product Goals

- Capture annual reports in a structured and consistent format.*
- Provide a clear website interface for report creation, review, and management.*
- Protect sensitive information through authentication and role-based access control.*
- Allow drafts, attachments, and later review without losing progress.*
- Create a foundation that can grow into a broader internal ministry ERP system.*

4. ADVANCED SECURITY & AUTHENTICATION ARCHITECTURE

To protect sensitive ministry data and ensure accountability, the system implements a multi-layered security protocol:

Tier 1: Credential Authentication: Standard secure login using validated email addresses and encrypted passwords.

Tier 2: Multi-Factor Authentication (MFA): A 6-digit One-Time Password (OTP) verification sent to the user's registered mobile device.

Tier 3: Knowledge-Based Authentication (KBA): A mandatory security question and secret answer challenge (with hints) required before accessing high-stakes data entry forms.

4. User Roles and Access

The system uses Role-Based Access Control (RBAC) where users are only given access based on their role. The system is built on a "Need-to-Know" basis to maintain departmental and zonal boundaries:

Travelling Secretary: Full area-wide access to view, edit, aggregate, monitor, and collate reports from all nine zones and at the area level.

Area Leadership: "Read-only" Area-wide access to view, aggregate, and monitor reports across the area.

Zonal Representatives: Permissions are restricted to viewing and editing data strictly for their assigned zone (e.g., Nchia, Gokana, Bori).

Staff Office (Missionaries): Dedicated access to monthly Missionary reporting modules with strict individual reporting requirements.

Role	Permissions
Travelling Secretary	Views submitted reports, monitors progress, and reviews or approves content, saves drafts, grant access, approves content. Creates and edits the annual report, uploads appendices, saves drafts, and generate the final

	report.
Area Leader	Views submitted reports, monitors progress, and reviews content.
Zonal Reps and Missionaries	Creates and edits reports, view and review submitted reports, uploads, saves drafts, and generate the final report for their zone.
Department Head	Sees sections relevant to their department and contributes or verifies information.
System Admin	Manages users, roles, permissions, and system settings.

5. Website Structure / Sitemap

The website should feel like a guided internal portal. The navigation is arranged from top-level access to report workflow pages and then to administrative pages.

Area	Pages	Purpose	Primary users
Public / Access	Login, Password, and OTP Verification	Secure entry into the portal	All users
Core Workspace	Dashboard, Reports List, Report Wizard, Report Detail	Main reporting workflow	Authenticated users
Administration	Users, Roles, Departments, Audit Log, Settings	Manage the system and permissions	Admin

6. Website Design

6.1 Page-by-Page Website Design

The table below defines how each page should look and behave. This is the design reference for the actual build.

Page / Screen	What the page shows	Main UI blocks	Primary actions	Access
Login Page	Brand title, welcome message, email/password fields	Logo area, sign-in card, help text	Sign in, request password reset	Public
OTP Verification Page	Second-factor code entry after successful password login	Code input, resend timer, verification note	Verify code, resend OTP	Public after login
Dashboard	Summary cards and quick access to active reports	Top bar, sidebar, KPI cards, recent activity, shortcuts	Open report, continue draft, view notifications	Authenticated
Reports List	All reports with filters, search, and status labels	Search bar, filter panel, table/list, paging	Open, edit, submit, export	Authenticated
New Report / Cover Page	Annual report metadata fields	Form header, year, area, secretary, submission date	Save draft, continue	Travelling Secretary
Schools Programmes Page	Structured fields for training overview	Text, numeric fields, multi-select, upload slot	Save draft, attach appendix, next	Travelling Secretary, Missionaries, Zonal Schools Coordinator
Camping Programmes Page	Camp statistics and financial summary fields	Camp cards, stats blocks, finance section	Save, upload report, next	Travelling Secretary, Missionaries, Zonal Reps, Zonal Schools Coordinator
Promotional Programmes Page	BRP and rally reporting section	Programme cards and summary inputs	Save, add support file, next	Missionaries, Zonal Schools Coordinator
Children Page	Training inputs for children-focused activities	Overview, location, duration, outcome box	Save and next	Travelling Secretary, Missionaries, Zonal Reps, Area/Zonal Children Coordinator

Page / Screen	What the page shows	Main UI blocks	Primary actions	Access
Pilgrim Page	Conference and retreat reporting inputs	Participation stats, notes, impact area	Save and next	Travelling Secretary, Area leaders, Zonal Reps, Missionaries.
Tours Page	Tour summary and outreach records	Zones visited, activity log, achievement notes	Save and next	Travelling Secretary, Missionaries
Missionary Report Page	School Statistics, Weekly analysis, Operational logs	School Visitation, programs held, feedback	Edit, save and next	Travelling Secretary, Missionaries
Trainings Page	All training and development records	Programme, venue/date, skills learned	Save and next	Staff / Admin
Coordination / Oversight Page	Meetings, committees, supervision notes	Meeting cards, minutes section, oversight notes	Save, finalize report	Area leadership
Review & Submit Page	Full report preview with validation status	Section summary, missing-fields alerts, submit button	Review, edit, submit	Travelling Secretary / Reviewer
Report Detail Page	Submitted report in readable format	Tabbed sections, attachments, comments	Print, export, comment, approve	Authorized users
User Management Page	Users and roles table	User list, role editor, invite button	Create user, assign role, disable user	Admin
Department Management Page	Department list and ownership settings	Departments table, edit panel	Create, update, archive	Admin
Audit Log Page	Activity trace and security events	Timestamped log table, filters	Inspect, export logs	Admin
Settings Page	System preferences and default values	General settings, notification settings	Update system settings	Admin

6.1 Integrated Departmental Structure

The platform is organized into core ministry hubs to prevent data silos:

Department	Key Subsidiaries & Focus Areas
Schools & Youth	Leadership Training (SLTC), Long Vacation Camps, Rallies, Teachers Seminars, School Visitations, and Youth Summits.
Children Ministry	Primary School Visitations, Children Rallies, Bible Clubs, Children’s Day, Christmas Parties, and Week of Emphasis.
Pilgrims (Adult)	Numerical Statistics, National Family Week, Week of Sacrifice, Easter Conference, Prayer/Gift Day, and Mission Outreaches.
Camping Unit	A strategic router that links specific camp reports back to their parent departments (e.g., SLTC linked to Student & Youth).

7. Detailed Screen Behaviour

7.1 Dashboard design

The dashboard should use a clean card-based layout. The top row contains summary cards such as Total Drafts, Submitted Reports, Pending Reviews, and Attachments Uploaded. Below the cards, the page should show Recent Activity, Quick Actions, and a progress panel that tells the user whether the annual report is incomplete, in draft, or ready for submission.

7.2 Report wizard design

The report creation experience should be a multi-step wizard. Each step represents one section of the annual report. The left sidebar or progress tracker should show all sections, with completed steps marked clearly. Users should be able to save at any stage and return later without losing data.

7.3 Review page design

The review page should render the full report in a readable, print-friendly format. Each section should be collapsible or linked from a table of contents. Validation warnings should appear beside missing sections or empty required fields before submission.

7.4 Attachment handling

Every appendix area should support file upload with visible filename, upload status, and download link. The interface should show allowed file types, maximum size, and whether the file has already been attached to the section.

8. Functional Requirements

Requirement	Description	Priority
Authentication	Email/password sign-in with phone number OTP verification.	High
Role-based access	Users should only see pages and buttons permitted by their role.	High
Verification	Security Question Challenge before access to report pages.	High
Draft saving	Users can save progress at any point and continue later.	High
Dynamic form sections	Each report section must accept structured inputs, not only plain text.	High
File uploads	Appendices and reports can be uploaded and linked to specific sections.	High
Search and filtering	Reports should be searchable by year, date, status, department, and author/editor (optional).	Medium
Review workflow	Submitted reports should support review, comments, and approval states.	Medium
Export/print	Reports should be printable and exportable to PDF in later phases.	Medium

9. Data Model / Content Structure

The system should store each annual report as a structured object with nested sections. This makes the data easy to edit, review, validate, and later export.

Entity	Important fields	Notes
User	uid, fullName, email, phone, role, department, status	Linked to Firebase Authentication
Report	reportId, year, area, createdBy, status, submittedAt	Main container for annual report
Report Section	sectionName, fields, comments, completionState	Each numbered section is a sub-object
Attachment	fileName, fileUrl, fileType, uploadedBy, linkedSection	Stored in Firebase Storage
Audit Event	actor, action, entity, timestamp, result	For traceability and admin oversight

10. Security and Privacy Requirements

- All access must require authentication.
- Users must only see information allowed by role and department.
- Sensitive data should not be exposed in public routes or unauthenticated pages.
- File uploads should be validated by type and size.
- Audit logging should record important actions such as login, edits, submission, and deletion.
- The initial deployment may remain private and accessible only to authorized users.

11. Development Phases

Phase	Main focus	Deliverables	Exit condition
Phase 1 – Foundation	Project setup, UI shell, routing, Firebase connection	Login page, basic layout, initial database connection	Users can sign in and land on a dashboard shell
Phase 2 – Authentication and RBAC	Email/password login, role assignment, protected routes	Auth flow, role checks, user profile data	Different roles access the correct screens
Phase 3 – Reporting Wizard	Build the annual report form sections	Cover page through section 11, save draft behaviour	A full report can be created and saved
Phase 4 – Review and Submission	Validation, summary view, submission state	Review page, submit action, status changes	A report can be submitted and viewed
Phase 5 – Admin and Oversight	User management, departments, audit logs	Admin pages and oversight tools	Admin can manage users and trace actions
Phase 6 – Enhancements	Export, notifications, analytics, UI polish	PDF export, notifications, dashboards	System is ready for wider operational use

12. Success Metrics

Usability	A user can complete the annual report without confusion, missing sections, or loss of data.
Data quality	Reports are submitted in a consistent structure with minimal manual cleanup.

Security	Only authorized users access protected pages and records.
Efficiency	Drafts, reviews, and submissions take less time than the manual process.
Adoption	The system becomes the primary way of preparing the annual report.

13. Risks and Constraints

- Users may be unfamiliar with structured digital forms, so the UI must be simple and guided.
- Poor internet or local network instability may affect access if hosted privately.
- Long reports require draft saving and robust validation to avoid data loss.
- File uploads need storage rules and size limits to keep the system reliable.

14. Future Enhancements

- Generate printable PDF reports automatically.
- Add comments and approval workflow between leadership roles.
- Create analytics for ministry trends across years.
- Support notifications for submission deadlines and review status.
- Implementing logic to auto-calculate termly report summaries from stored monthly data.
- Comprehensive tracking of every data entry, edit, and submission for administrative oversight.

15. Closing Note

This PRD defines the website as a structured reporting portal, not just a text-based form. It provides the basis for building a professional, role-aware web application that can be developed in phases and expanded over time.
